

Algorithmic Solution of High Order Partial Differential Equations in Julia via the Fokas Transform Method

An Initial Thesis Presented in Partial Fulfillment of
the Honours Bachelor's Degree in Science

Linfan Xiao

Abstract

TBD

Mathematical, Computational, and Statistical Sciences
Under the supervision of Prof. Dave Smith
Yale-NUS College
March 2019

Contents

Abstract	1
Acknowledgments	1
1 Introduction	1
1.1 Motivation	1
1.2 The Initial-Boundary Value Problem	1
2 Preliminaries	1
2.1 Boundary Value Problems and Adjoint Boundary Value Problems	1
2.2 Roots of Exponential Polynomials	1
2.3 The Fokas Transform Pair	1
3 Algorithm	1
3.1 Constructing the Adjoint of a Homogeneous Boundary Condition	1
3.2 Approximating the Roots of an Exponential Polynomial on a Bounded Region	1
3.3 Solving the Initial-Boundary-Value Problem	1
4 Implementation	1
4.1 Platform	1
4.2 Examples	1

1 Introduction

1.1 Motivation

1.2 The Initial-Boundary Value Problem

2 Preliminaries

2.1 Boundary Value Problems and Adjoint Boundary Value Problems

2.2 Roots of Exponential Polynomials

2.3 The Fokas Transform Pair

3 Algorithm

3.1 Constructing the Adjoint of a Homogeneous Boundary Condition

3.2 Approximating the Roots of an Exponential Polynomial on a Bounded Region

3.3 Solving the Initial-Boundary-Value Problem

4 Implementation

4.1 Platform

4.2 Examples
